August 12, 2024

Download a new ECLIPSE update & you'll be able to determine whether guarantors are active vs. inactive & exclude inactive guarantors from being selected on the **Condition** tab.

After spending a recent weekend speaking with clients at the NY State Chiropractic Association 2024 Spring Convention, we realized that there's still a great deal of confusion out there regarding the cloud product we introduced last year. This week, we're sponsoring the FCA National in Orlando, FL. Come visit our booth!

We do not require you to “upgrade” (your wording - not ours). to the cloud version of ECLIPSE. At the seminar we successfully convinced some of you to stay with your Windows version of ECLIPSE! We have no intention of ending development & support of our Windows software - which is used by thousands of healthcare providers nationwide! Each product has unique advantages & disadvantages **So, what are the best reasons to consider the new version?**

Connectivity. *ECLIPSE EHR Cloud helps you leverage the internet to streamline your patient interactions!*

- Sending & receiving email & text messages is fully integrated at both the patient & system levels & is no different from working with a patient's ledger, appointments or documents. It's all right there!
- Patients can use simple click-&-pay options to pay balances.
- Easily log in from anywhere in a more secure & HIPAA compliant manner than is possible using 3rd party products to access your Windows data.

Efficiency. *ECLIPSE EHR Cloud can help you automate some of your data entry chores!*

- Send a quick email to a new patient. They can fill out an online intake form on their phone, a tablet, or their computer. And most information auto-populates (with your approval) into a new patient folder - which reduces your workload.
- As part of the same process, provide documents for patient signature which are automatically added to the new patient's folder as well!
- When you use features such as click-&-pay statements, patient payments are automatically added to the patient's ledger!

Background processing. *ECLIPSE EHR Cloud can improve your efficiency!*

- Set & forget features like appointment reminders.
- Billing & other reports run in the background. You simply get notifications when they're complete. No waiting!

Basically, our cloud software excels when you want to specifically leverage interconnectivity with your patients. Since any connection from our cloud servers to data residing within your on-premises computer system will be comparatively very slow, we don't offer similar features in the Windows version of ECLIPSE.
